Star
DAEMON

StarDaemon

Intercepting and conditionally launching tasks is the role performed by the StarDaemon StarDemon module. Depending upon the captured files extension, or upon the data itself, different jobs can be started such as executing a specific program or starting a script.

Main features

Setting-up is fast and simple
Graphical interface for setting-up tasks
StarDispatch and StarPage can be called up automatically together with the appropriate parameters
Any other program can be called up automatically to receive the appropriate data and parameters
Trace mode available for analyzing task processes

Functions in English and French versions on all Microsoft supported Windows systems.

StarJet
